

TRIPWIRE IP360 v7.4

ENTERPRISE-CLASS VULNERABILITY AND RISK MANAGEMENT

Understanding security risk on the global enterprise network is essential to comprehensive IT risk management. However, the high rate of change on enterprise networks, the constantly changing threat environment, and increased focus on internal and regulatory compliance have made this task increasingly difficult. The solution is Tripwire® IP360™, the leading vulnerability and security risk management system that enables organizations to cost-effectively measure and manage their network security risk.

Tripwire IP360 provides complete visibility into the enterprise network including all networked devices and their associated operating systems, applications and vulnerabilities. It's an ideal foundational control for effective security risk management. Tripwire's industry-leading Vulnerability and Exposure Research Team (VERT) keeps Tripwire IP360 up-to-date with accurate, non-intrusive discovery signatures that are current and relevant to large enterprises.

Tripwire IP360 uses advanced analytics and a unique quantitative scoring algorithm based on several factors—including the vulnerability score and business-relevant asset value—to prioritize the vulnerabilities for remediation. The result is actionable data that enables IT security teams to focus on the tasks that will quickly and effectively reduce overall network risk with the fewest possible resources.

The Tripwire IP360 security risk management solution delivers:

- » Comprehensive discovery and profiling of all network assets;
- » Highly scalable architecture with low network and system impact;
- » Advanced prioritization metrics combine asset value and vulnerability score; and
- » Actionable reporting designed for all enterprise audiences.

FIND EVERYTHING ON YOUR NETWORK

Tripwire IP360 discovers all networked hosts, applications, services, vulnerabilities and configurations, which provides a comprehensive view of your network and sets the foundation for effective risk management and compliance processes. Only Tripwire IP360 provides low bandwidth, non-intrusive host and network profiling.

TRIPWIRE IP360 HIGHLIGHTS

- » Comprehensive discovery and profiling of all network assets
- » Customer-designated asset values to place security risk in the context of the business
- » Objective risk metrics and automated reporting to measure network security risk and track progress over time
- » Adaptive Threat Protection adjusts security controls in response to changing cyberthreat conditions

PRIORITIZE INTELLIGENTLY

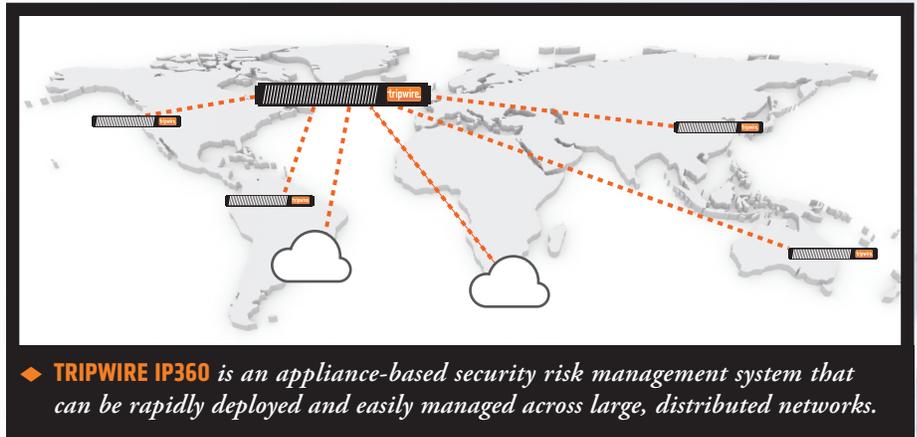

Tripwire IP360 discovers a wealth of data about the hosts that reside on your network, but rather than provide that data in an endless list, it prioritizes remediation tasks, which enables users to focus on the items that most effectively reduce risk on critical systems.

CONNECT SECURITY TO YOUR BUSINESS

Tripwire IP360 provides an easy-to-use web interface for administration, configuration, reporting and workflow. Highly granular access controls and user roles enable the solution to conform to existing security processes. Customized reports that provide thorough, objective and comprehensive views of risk on the network are available for all audiences—from technically-minded security teams to executives and audit teams.

ADAPTIVE THREAT PROTECTION

The built-in integration with Tripwire Enterprise allows you to enable Adaptive Threat Protection for your network—an integrated, automated and prioritized view of your enterprise security posture that only Tripwire can provide. Adaptive Threat Protection is achieved by leveraging Tripwire IP360's vulnerability intelligence, the rich information about the risk posture of your network that includes attack surface, vulnerability risk and potential business impact of an exploit. Automatically adjust your security controls based on system changes and vulnerability intelligence to significantly reduce overall enterprise cyberthreat risk.

DEPLOYMENT YOUR WAY

Tripwire IP360 is an entirely on-premise solution that utilizes a hardened appliance architecture designed for security, ease of installation, and centralized management that is scalable to the largest global enterprises. Utilizing one or more physical or virtual appliances, running a locked down, non-Windows operating system, and employing strong encryption for communication, Tripwire IP360 is a secure, easy-to-maintain solution.

GET MORE OUT OF YOUR CURRENT TOOLS

Tripwire IP360 is built on open standards that enable the integration of vulnerability and risk management into existing business processes and IT systems such as help desk, asset management, SIEM, intrusion detection/prevention and other security solutions. The comprehensive endpoint intelligence gathered by Tripwire IP360 can be leveraged to enhance existing information management solutions and drive automation across the security ecosystem.

◆ Tripwire is a leading provider of advanced threat, security and compliance solutions that enable enterprises, service providers and government agencies to confidently detect, prevent and respond to cybersecurity threats. Tripwire solutions are based on high-fidelity asset visibility and deep endpoint intelligence combined with business-context, and enable security automation through enterprise integration. Tripwire's portfolio of enterprise-class security solutions includes configuration and policy management, file integrity monitoring, vulnerability management and log intelligence.
